DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-43, drawn to induced cavity loss laser that emits pulses of light, classified in class 372, subclass 10.
 - II. Claims 44-56, drawn to a method of peening metal with a coherent light, classified in class 219, subclass 121.85.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because peening of metal using a laser in group II can be accomplished with any laser. The subcombination has separate utility such as any laser could be used for performing a method of peening metal as in invention II.
